Harman Kamboj

Forward Deployed / AI Deployment Engineer · Full-Stack · LLM Agents · TypeScript, Python

Chandigarh, India · Remote (US/EU overlap) · +91 80548 68986 · playcivil@gmail.com · linkedin.com/in/hammyasf · github.com/hammyasf

SUMMARY

Hands-on engineer who works directly with founders and clients to take AI from idea to production. 13+ years shipping full-stack platforms across AI, crypto, enterprise, healthcare and e-commerce, much of it as the engineer in the room with the customer: scoping with stakeholders, building fast, demoing, and iterating on their feedback. Most recently I built Claude-based agentic pipelines at a Y Combinator startup: multi-model routing across Opus, Sonnet and Haiku, LLM-as-judge evals, sandboxed code generation and per-run cost controls, reporting straight to the founder.

CORE SKILLS

AI engineering	LLM agents and agentic workflows, RAG (embeddings, vector search, retrieval pipelines), Anthropic Claude API, multi-model routing (Opus/Sonnet/Haiku by task), tool use, LLM-as-judge evaluation, eval-driven prompt iteration, sandboxed code execution, token and per-run cost controls, fal.ai media models
Customer delivery	Founder- and client-facing scoping, live demos, requirements to production, stakeholder communication across time zones, end-to-end ownership
Languages	TypeScript, JavaScript, Go, Python, PHP, Java, Kotlin, Swift, Lua
Frontend	React, Next.js, Svelte, Vue, Angular; design systems (Storybook), Redux/Zustand, code splitting, Core Web Vitals, WCAG accessibility
Backend & APIs	Node.js, Express, Go, Laravel; REST and GraphQL schema design; service boundaries and API contracts
Data & events	PostgreSQL (Supabase), MongoDB, Redis; event-driven on-chain indexing (The Graph, Subsquid)
Identity & payments	OAuth login flows, Stripe payment integration
Quality & delivery	Jest, React Testing Library, Cypress, Sentry; Docker, GitHub Actions, AWS (core services, CloudFront), Vercel; staging and preview environments

EXPERIENCE

Senior Full-Stack Engineer, AI Platform · CodeWisp (Y Combinator W26) — Jun 2026 – Present · Remote

AI game-generation platform · TypeScript, Node.js, React, Supabase, Claude, fal.ai, Three.js

- Worked directly with the founder in twice-weekly product calls to scope features, demo builds and turn feedback into the next iteration.
- Architected the end-to-end generation pipeline as sequential agentic stages: routing, research, build, art, audio, quality gate and publish.
- Built multi-model routing across Claude Opus, Sonnet and Haiku, matching model tier to task complexity and keeping generation under a fixed $6 per-run cost cap.
- Designed a "Judge" LLM-as-judge evaluation stage that verifies sprite consistency, level passability, win states and mechanics, iterates on failures and logs findings to improve system prompts.
- Built a deterministic 2D/3D runtime at 60 fps with hash-based verification and per-game engine versioning, so stale games regenerate automatically after migrations.
- Constrained AI code generation to a Lua sandbox to cut hallucinated code. Shipped a studio editor with asset management, material shaders and cutscenes, plus a usage credit limiter.
- Built the organic content engine for Petlings, the company's iOS game: a seeded battle simulator and code-driven video templates (HyperFrames, GSAP, ffmpeg) that produced 19 short-form videos in a week, with reusable episode templates for new content in minutes.

Founder & Lead Engineer · Independent AI Products — 2025 – 2026 · Remote

- Built Codepost, an AI code security scanner and PR-triage bot for vulnerabilities in AI-generated codebases. Owned the product spec, CLI and launch site.
- Prototyped B2B AI workflow tools, including an AML alert-triage copilot and a helpdesk auto-QA and triage app.

Senior Full-Stack Engineer · Shiba Inu (Shib.io) — Jul 2024 – Jul 2025 · Remote

Go, Node.js, TypeScript, React, Svelte

- Built the Shib.io developer portal for a top-10 cryptocurrency, including the transactions and balances APIs, token balance displays and transaction visualisations for 10K+ daily users.
- Built Subsquid indexers for on-chain event data, plus the cross-chain bridge and token swap.
- Built a shared React component library in Storybook. Improved load performance with code splitting and lazy loading, and added Jest and Cypress test automation.
- Delivered the public marketing sites and the web side of the metaverse experience.

Senior Full-Stack Developer & Tech Lead · Arch Systems — Jul 2023 – Jun 2024 · Remote

- Tech lead for the Mental Health Foundation's screening-test platform used by practitioners. Owned architecture and engineering delivery.
- Set up a reusable component design system and built React dashboards with real-time data visualisation.

Senior Full-Stack Engineer · Toptal — 2021 – 2023 · Remote

- **Endeavor (OpenSpeaker):** senior backend engineer on an enterprise platform for booking talks and meetings with high-profile speakers. Node.js, TypeScript, React, GraphQL.
- **ElasticSwap:** built The Graph API, on-chain indexing and the exchange frontend for a DeFi AMM DEX.
- **GatheredHere (Australia):** full-stack on Australia's largest funeral-services platform, built on Next.js.
- **Zvoid:** built a YouTube analytics product combining API data, scraping and AI-generated suggestions.

Full-Stack & Game Engineer · Gometa (Koji) — 2020 – 2021 · Remote

- Built most of the templates creators used to make Kojis. Ran the approval and allocation workflow for new apps and games.
- Implemented Stripe payments and OAuth login flows. Worked across React, Angular, Svelte and Vue, with PlayCanvas, Phaser, Three.js, PixiJS, and Unity/Godot via JavaScript bridges.

Software Engineer · Scaleflow — 2018 – 2019 · Remote

- Sole full-time engineer on a sprint-productivity app. Worked directly with the CTO and owned the build end to end (Ember.js, Ruby on Rails).

Lead Developer · Aftertutor Ventures — 2016 – 2020 · Chennai, then remote

- Led development as the EdTech grew into a software services business. Delivered the Bewakoof e-commerce site and other client builds, including Frappe.
- Built IoT systems and native Android/iOS apps, then moved the team to React Native. Shipped Play Store apps with 100K+, 50K+ and 10K+ installs.

Full-Stack Developer & UX Designer · RadEgg — 2012 – 2016 · Remote

- Designed and built a mobile-first anti-theft web app that reached 20,000 users in six months. Migrated a legacy jQuery codebase to React.

LEADERSHIP & COMMUNITY

- Runs a game-development community of 5,000+ members and hosts online game jams, including the CodeWisp Game Jam on itch.io.
- Reviews open-source TypeScript libraries and reports correctness and concurrency defects to maintainers (e.g. tldraw, RivetKit, Polotno, Revideo).
